

Yocto Session 15 -
Recipe Development
(Tasks and Workdir) Part
4

* Dofetch : DL_ DIR
* unpack : WORKDIR
* patch :
* configure : B ~S
* compile : B ~S
* install :
* package :

Any make file has this variable :
* CC : C compiler
* Cxx : c++
* CFLAGS : compiler options (example
of options for optimisation, display
warning)
* LDFLAGS : linker options
* As : path of assembler
* LD : path of linker
=> Bitbake build all this variable

B in YOCTO is the folder build that
contain the output of compilation

B ~ S (default) output of compilation
makes in S
we must change S

D : variable Point in workdir/image
